

R-616S

Rutile TiO₂
● A special type of plastic

Product description

R-616S is an excellent rutile titanium dioxide produced by a new technical Sulphate process. With professionally designed and controlled in hydrolysis and calcination process, the particle size of R-616S is more uniform under advanced and finely grounding technical. R-616S owns lower oil absorption and better levelling property through the special surface treatment. With our company's large-scaled producing equipment, advanced DCS control system, high technical and experienced management, R-616S exhibits outstanding and stabilized quality.
